Banner setup instructions

HTML5 (max 140 KB)

Banners should be delivered in HTML, with Javascript and CSS code which can be a part of HTML or can be delivered in separate .JS and .CSS files.

The banner should not contain a link. The link will be placed by MojPosao technical support team.

Static (max 140 KB)

Static banners can be in .JPG, .PNG or .GIF formats.

The Chrome browser has restrictions on playing flash animations so your campaign will deliver poor results.

The banner must be created in ActionScript 2.0 with code for clickTAG links which is placed on the upper layer as a Button element:

on (release) { getURL(clickTAG, "_blank");

}

After the clickTAG is set up properly, MojPosao technical support team will set the link.
